

HAIDA GWAI
HIGHER EDUCATION SOCIETY

**Diversifying Resource Dependent Communities
Through Community-Based Development**

HGSE 354

**** THIS IS A SAMPLE SYLLABUS, GUESTS, FIELD TRIPS AND OTHER COURSE
DETAILS MAY VARY FROM YEAR TO YEAR. Contact HGHEs for more details.**

Instructor:	Prof. David J.A. Douglas
Credits:	3

Course Description:

This is a course in community development. Large scale political and economic changes, and societal changes, and now climate change, are reshaping rural, resource dependent communities across Canada, and around the world. And the same applies to British Columbia, and Haida Gwaii. But, either by design or default, responsibility for community wellbeing, resilience and survival is increasingly being left to communities themselves. This course offers an intensive and in-depth examination of the forces that restructure local economies, both historically and contemporarily, and links rural economic development with the legacy of resource development and marginalization of Aboriginal communities across British Columbia. Selected theoretical and practical aspects of community economic development processes are explored, in the more holistic context of community development. Topics will include area and sectoral economic analysis, public participation and engagement, governance, social capitals, organization development, community visioning and strategic management, enterprise facilitation, multi-community collaboration, and several other core concepts and topics. Various strategies that communities may initiate to diversify their economies are explored and critically contrasted.

Course Objectives:

By the end of the course, students should be able to:

- Outline the major forces that have shaped and will shape rural, resource dependent communities in British Columbia
- Articulate their own understanding of the nature of communities, particularly rural, smaller, remote and First Nations communities
- Explain problems in rural and northern development contexts within a broad framework of economic and political economy theory

HAIDA GWAII HIGHER EDUCATION SOCIETY

- Describe how current efforts to diversify rural economies are influenced by the legacy of resource development and Aboriginal community marginalization in rural BC
- Outline several strategies for rural economic development, present their rationale, and analyze their strengths, weaknesses, and major differences
- Conduct a basic socioeconomic analysis of a rural, resource dependent community and suggest candidate strategies that may be undertaken to diversify their economy

The Learning & Development Culture:

The instructor will elaborate and discuss further his approach to learning, and personal development, in the opening class session. A cooperative approach rather than a competitive approach to learning will be adopted, focusing on the personal development of the participating student (and the instructor himself) through this course. Respectful listening, observation and exploration will be combined with a contractual commitment to effective participation throughout the course, disciplined independent and group research and enquiry, critical use of the course resources, and a partnership with community participants in the developmental process that this course entails.

Course Organization:

Learning will be achieved in a variety of ways - through the instructor's in-class lectures and presentations, student presentations, community resident and other guest speakers' presentations, examining case studies, intensive readings, small group community-based research projects, researching and writing individual or group **course papers**, if adopted, through a **course journal** (partial total grades), field trips to the communities and elsewhere, in-class discussions led by the students and the Instructor, and other ways. This interdisciplinary course will have a strong experiential base and will integrate with the student's experience in other courses (e.g. the CSL course).

The principal course activities will be in-class lectures and presentations by the instructor, facilitated discussions, in-class presentations by students, in-class presentations by community residents and others (e.g. via Skype), and several field trips.

The instructor will encourage all participants to use as their primary formal learning vehicles for their **course papers**, collaborative, community-based projects, directly involving members of the community. Course grades will be assigned to these, based upon a discussion in the opening class.

HAIDA GWAII
HIGHER EDUCATION SOCIETY

The instructor will give intensive one-on-one and project group advice and coaching throughout the course, during class, on field trips, after class, on weekends, and otherwise as required.

Class Organization:

Most class sessions will commence with questions and issues, and relevant discussion relating to the previous class or field trip. This will be followed by a lecture or presentation by the instructor, and further discussion.

In some afternoon classes time will be set aside for group project work. There will be a 20-minute break in all morning classes.

Assigned Readings:

Course participants are advised to systematically read and regularly consult one textbook that will be used as a primer for this course. The book is: **Second Growth**. Markey, Sean, John T. Pierce, Kelly Vodden and Mark Roseland (UBC Press, 2005).

A supplementary, but *not* a required primer will be Takeda, Louise. **Islands' Spirit Rising: Reclaiming the Forests of Haida Gwaii**. (UBC Press, 2015).
